

Lachlan Deck

Highly **motivated** and **collaborative** final-year RMIT student. Experienced with the **Scrum** framework and **Agile development**. I'm passionate about software development, DevOps, and learning about software in general. My Major is in enterprise software development, which has given me the opportunity to take courses in web and iOS development, relational and non-relational databases, and Java development.

Technical Skills

- Database Storage (**MySQL**, SQLServer, SQLite, MongoDB)
- Object-Oriented Programming (**Java**: Javalin, and JavaFX)
- Web Development (JS, TS, **TypeORM**)
- Hapless CLI Enthusiast (**Git CLI**, Linux, NixOS, Nix, Helix)

Demonstrated Skills

- Focused and collaborative team member — I was a chef for three years while studying at RMIT
- Strong communicator, experienced in resolving workplace and team conflict, and maintaining a happy and open professional attitude
- Time management — I worked/volunteered casually while studying full-time at RMIT
- Self-directed learner — I spend a lot of my free time jumping into tech rabbit holes, and exploring new technologies

Projects

Full Stack React-MySQL Website

Part of the RMIT Full Stack Development course. We built a teacher's assistant application platform with three user types. Lecturers could rank applicants and select them for a course. **tech**: TS, Express, axios, TypeORM, GraphQL, MantineUI, Tailwind, Node, ESLint, and Jest

JavaFX desktop application

Part of the RMIT Further Programming course, this was a very simple application built with: Java, JavaFX, and SQLite.

My NixOS/Home Manager configuration

This has been a hobby project of mine, Nix is a declarative functional programming language used for building reproducible packages and running software. For the last year I've been experimenting using various Nix ecosystem tools like Home Manager in my studies, right now I am using it to replace Homebrew on my Mac.

Education

- Bachelor of Information Technology
- Enterprise Software Development Major
- 2022 – Present

Volunteering

Student Mentor

- Due to high academic achievement my 1st year I was able to apply for the Vygo/RMIT student mentor program
- when accepted to the program mentors take a training course and then are able to respond to queries on the vygo platform
- As a student mentor I've been able to respond to coursework questions and help students with php developement
- As a Result of my mentoring experience I feel like I've gotten valuable experience triaging students issues, and creating an un-judgemental space for them to express and work through their challenges and uncertainties
